The PDB database

It's easier to import through **readr** package using the **read_csv()** function.

```
library(readr)

data <- read_csv("Data_Export_Summary.csv")
```

```
Rows: 6 Columns: 9
-- Column specification --------------------------------------------------------
Delimiter: ","
chr (1): Molecular Type
dbl (4): Integrative, Multiple methods, Neutron, Other
num (4): X-ray, EM, NMR, Total

i Use `spec()` to retrieve the full column specification for this data.
i Specify the column types or set `show_col_types = FALSE` to quiet this message.

Q1: What percentage of structures in the PDB are solved by X-Ray and Electron Microscopy.

The percentage of X-ray is 81.43% and 12.27% for Electron Microscopy.

Q2: What proportion of structures in the PDB are protein?

0.86

Q3: Type HIV in the PDB website search box on the home page and determine how many HIV-1 protease structures are in the current PDB?

868

```

Visualizing structure data

Using Mol*

I can insert any figure or image file using markdown format: `![Description](name_of_image)`

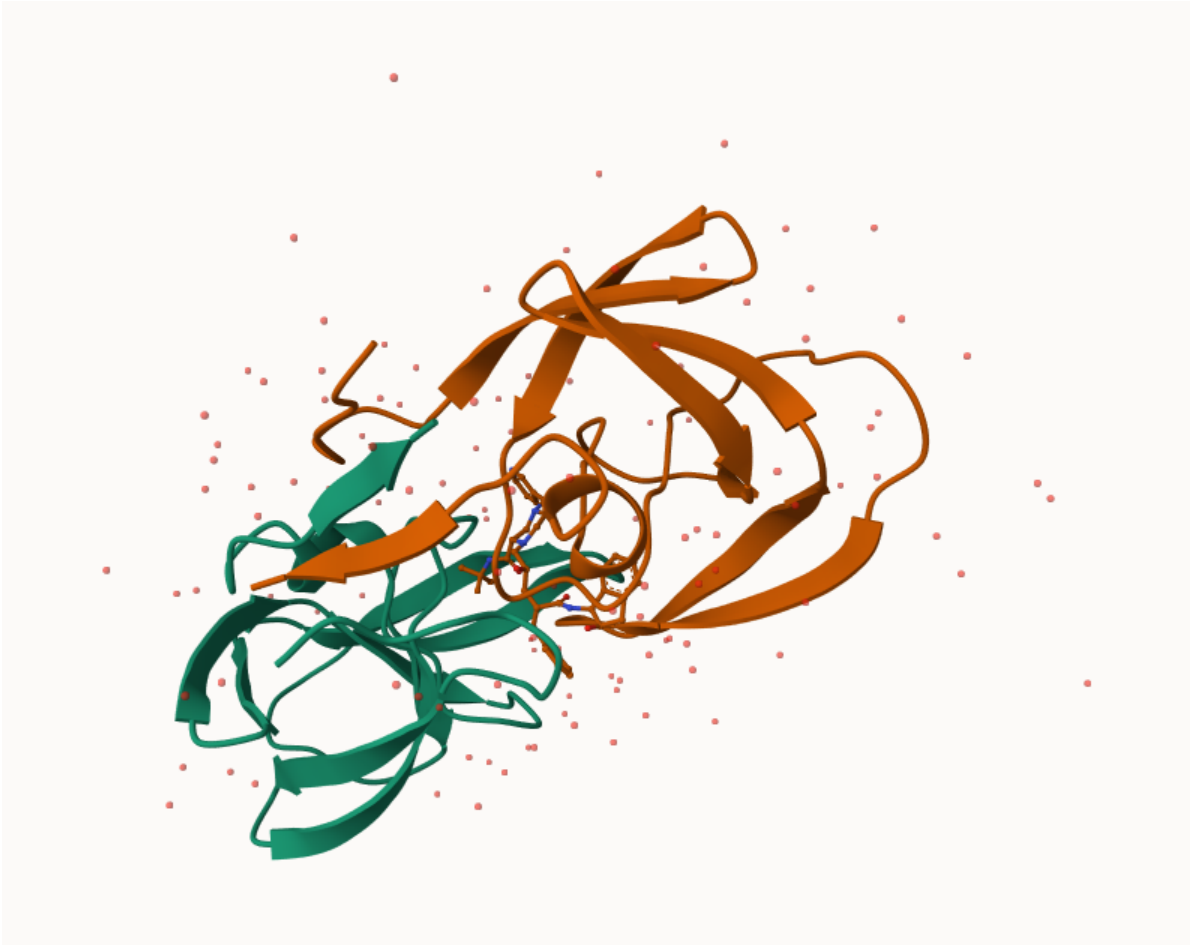

Figure 1: This is the HIV-Pr dimer with bound inhibitor

> Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

To reduce the complexity of the model.

> Q5: There is a critical "conserved" water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have

yes, it is water 308.

Q6: Generate and save a figure clearly showing the two distinct chains of HIV-protease along with the ligand. You might also consider showing the catalytic residues ASP 25 in each chain and the critical water (we recommend "Ball & Stick" for these side-chains). Add this figure to your Quarto document.

Bio3D package for structural bioinformatics

We can use the bio3D package to read and analyze biomolecular data in R:

```
library(bio3d)

hiv <- read.pdb("1hsg")
```

```
  Note: Accessing on-line PDB file
```

```
hiv
```

```
 Call:  read.pdb(file = "1hsg")

Prediction of functional motions

We can run a Normal Analysis (NMA) to predict large scale motions/flexibility/dynamics of any biomolecules that we can read into R.

Let's look at ADK and chain A only.

```

  Note: Accessing on-line PDB file
   PDB has ALT records, taking A only, rm.alt=TRUE

Play with 3D viewing in R

We can use the new **bio3dviewer** package, which is not yet on CRAN, to render interactive 3d views in R and HTML quarto output reports.

To install from GitHub, we can use the **pak** package.

```
library(bio3dview)

#view.pdb(adk)
```

Q10. Which of the packages above is found only on BioConductor and not CRAN?

msa

Q11. Which of the above packages is not found on BioConductor or CRAN?:

bio3d-view

Q12. True or False? Functions from the devtools package can be used to install packages from GitHub and BitBucket?

TRUE

Q13. How many amino acids are in this sequence, i.e. how long is this sequence?

214
