

class09_structural

Brad Hunter (PID: A69038089)

The PDB database

It's easier to import through **readr** package using the **read_csv()** function.

```
library(readr)

data <- read_csv("Data_Export_Summary.csv")
```

Rows: 6 Columns: 9

-- Column specification -----

Delimiter: ","

chr (1): Molecular Type

dbl (4): Integrative, Multiple methods, Neutron, Other

num (4): X-ray, EM, NMR, Total

i Use ``spec()`` to retrieve the full column specification for this data.

i Specify the column types or set ``show_col_types = FALSE`` to quiet this message.

```
data
```

A tibble: 6 x 9

	<code>`Molecular Type`</code>	<code>`X-ray`</code>	EM	NMR	Integrative	<code>`Multiple methods`</code>	Neutron
	<code><chr></code>	<code><dbl></code>	<code><dbl></code>	<code><dbl></code>	<code><dbl></code>	<code><dbl></code>	<code><dbl></code>
1	Protein (only)	176378	20438	12709	342	221	83
2	Protein/Oligosacch~	10284	3396	34	8	11	1
3	Protein/NA	9007	5931	287	24	7	0
4	Nucleic acid (only)	3077	200	1554	2	15	3

6	Oligosaccharide (o~	11	0	6	0	1	0

i 2 more variables: Other `<dbl>`, Total `<dbl>`

Q1: What percentage of structures in the PDB are solved by X-Ray and Electron Microscopy.

The percentage of X-ray is 81.43% and 12.27% for Electron Microscopy.

Q2: What proportion of structures in the PDB are protein?

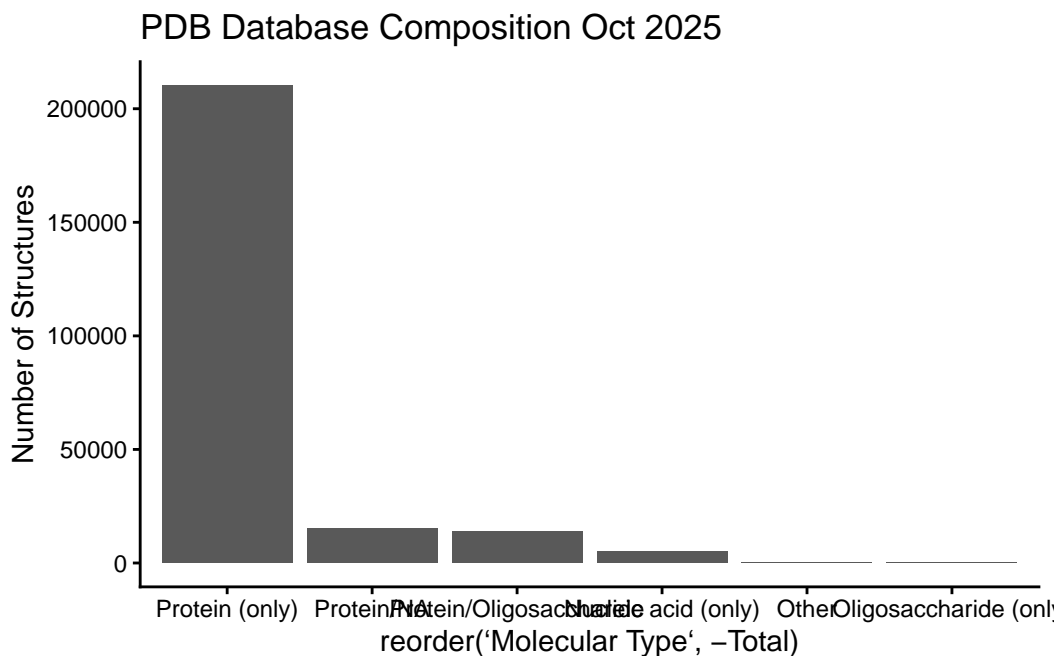

0.86

Q3: Type HIV in the PDB website search box on the home page and determine how many HIV-1 protease structures are in the current PDB?

868

```
library(ggplot2)
library(tidyr)

ggplot(data) +
  aes(reorder(`Molecular Type`, -Total), Total) +
  geom_col() +
  labs(title = "PDB Database Composition Oct 2025", y = "Number of Structures") +
  theme_classic()
```

Visualizing structure data

Using Mol*

I can insert any figure or image file using markdown format: ! [Description] (name_of_image)

Figure 1: This is the HIV-Pr dimer with bound inhibitor

Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

To reduce the complexity of the model.

Q5: There is a critical “conserved” water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have

yes, it is water 308.

Q6: Generate and save a figure clearly showing the two distinct chains of HIV-protease along with the ligand. You might also consider showing the catalytic residues ASP 25 in each chain and the critical water (we recommend “Ball & Stick” for these side-chains). Add this figure to your Quarto document.

Figure 2: The catalytic ASP25 and

Bio3D package for structural bioinformatics

We can use the bio3D package to read and analyze biomolecular data in R:

```
library(bio3d)
hiv <- read.pdb("1hsg")
```

Note: Accessing on-line PDB file

```
hiv
```

```
Call: read.pdb(file = "1hsg")
```

```
Total Models#: 1

Prediction of functional motions

We can run a Normal Analysis (NMA) to predict large scale motions/flexibility/dynamics of any biomolecules that we can read into R.

Let's look at ADK and chain A only.

```
adk <- read.pdb("1ake")
```

Note: Accessing on-line PDB file

PDB has ALT records, taking A only, rm.alt=TRUE

```
adk_A <- trim.pdb(adk, chain="A")
adk_A
```

```
Call: trim.pdb(pdb = adk, chain = "A")
```

Total Models#: 1

Let's write out a "trajectory" of predicted motion

```
mktrj(m, file="adk_nma.pdb")
```

Play with 3D viewing in R

We can use the new **bio3dviewer** package, which is not yet on CRAN, to render interactive 3d views in R and HTML quarto output reports.

To install from GitHub, we can use the **pak** package.

```
library(bio3dview)

#view.pdb(adk)
```

Q10. Which of the packages above is found only on BioConductor and not CRAN?

msa

Q11. Which of the above packages is not found on BioConductor or CRAN?:

bio3d-view

Q12. True or False? Functions from the devtools package can be used to install packages from GitHub and BitBucket?

TRUE

Q13. How many amino acids are in this sequence, i.e. how long is this sequence?

214
